

The value is clear. The choice takes work.

3 observations on how Finom communicates business banking value, transfer economics and plan choice before fully resolving the decisions behind them.

TARGET	LOOKING FOR
SMB owners / business decision-makers	A business banking product where payments, costs, returns and plans are easy to understand.

02-EXECUTIVE-SUMMARY

The value is clear. The choice takes work.

Finom makes its proposition attractive through concrete benefits, international payments, interest and business features. The harder part is turning those benefits into a confident decision.

Main observation

The homepage communicates strong value, but some of the work of turning that value into a confident business decision remains with the visitor.

INSIDE THIS REVIEW	PRIMARY FINDING	READING TIME	DOCUMENT
Transfer economics Plan choice Interest conditions	Value before decision	≈ 4 min read	Executive Review

03-OBSERVATION-01

A key transfer benefit is easy to miss in the broader story.

WHAT HAPPENS

Finom presents international payments through several benefits, including global coverage, speed and exchange-related information. Within this broader story, the page states: “Send and receive funds with a fixed fee of €5”

WHY IT MATTERS

For a business evaluating Finom for international payments, transaction cost can be a decisive part of the proposition. In the walkthrough, the fee initially passed unnoticed before becoming one of the strongest reasons to consider the product.

BUSINESS IMPACT

A meaningful economic advantage risks functioning as supporting information instead of becoming a clear reason to choose Finom.

04-OBSERVATION-02

The plans show differences, but the choice still requires interpretation.

WHAT HAPPENS

Finom provides a dedicated pricing section with multiple plans and a detailed comparison table. The information needed to compare them is present, but the walkthrough showed uncertainty about how those differences translated into a personal choice.

WHY IT MATTERS

At pricing, the user’s question changes from “Is Finom useful?” to “Which plan is right for me?” Comparison data helps answer the first question, but the visitor still has to connect the differences to their own business situation.

BUSINESS IMPACT

When plan differences require additional interpretation, users may spend more effort comparing options instead of understanding the intended value of each plan.

05-OBSERVATION-03

The 5% proposition answers the immediate question, but raises a longer-term one.

WHAT HAPPENS

Finom prominently presents: “5% p.a. Interest Account” with a fixed rate for the first five months. The condition is visible, but it naturally raises another question during evaluation: what happens after those five months?

WHY IT MATTERS

The value of an interest account depends not only on the initial rate, but also on the conditions surrounding it. When the benefit creates immediate interest, the most obvious follow-up question should be easy to resolve.

BUSINESS IMPACT

A strong financial proposition can leave part of its value unresolved if the visitor needs to look elsewhere to understand the longer-term context.

06-CLOSING-THOUGHT

The value is easy to see. The decision still needs assembling.

Finom already makes the product attractive through concrete business benefits. The harder part is turning those benefits into a clear answer to three questions: What matters most to my business? What will it cost me? Which option should I choose?

The page has much of the necessary information. The opportunity is to make the path from value → evaluation → choice more immediate.

Make the €5 transfer fee more prominent within the international-payment proposition.
Connect differences to clear business situations before the detailed comparison.
Clarify the longer-term context of the 5-month introductory interest rate where the benefit is introduced.
