

The value is there. The path to it is not.

9fin's strongest value becomes clear only after the visitor reaches the right context and sees the product in action.

ROLE	LOOKING FOR
Buyside credit investors / credit research users	A professional credit research tool where specialised data, AI and research workflows reduce fragmented manual work.

02-EXECUTIVE-SUMMARY

The value is there. The path to it is not.

9fin makes its specialised credit-market capabilities increasingly tangible as the visitor moves through the experience. The strongest product value becomes clear once the workflow is demonstrated.

Main observation

The journey requires the visitor to first establish relevance, then assemble the relationship between capabilities and workflow, before the product becomes concrete enough to evaluate through a trial.

SERVICE

UX Review

03-OBSERVATION-01

Relevance arrives after the product story.

WHAT HAPPENS

The homepage introduces AI, debt-market intelligence, speed and trust before showing the professional contexts 9fin serves. Buyside appears later through the audience selection.

WHY IT MATTERS

The visitor already knows their professional context. They need to recognise how 9fin applies to their work before interpreting the broader platform story.

BUSINESS IMPACT

Late relevance makes the visitor spend attention establishing fit before reaching the part of the experience most directly connected to their workflow.

04-OBSERVATION-02

Capabilities arrive before the workflow.

WHAT HAPPENS

The Buyside page presents news, documents, covenant intelligence, earnings analysis and AI before showing how these capabilities connect in practice. The workflow becomes clear in the later AI Guide.

WHY IT MATTERS

Knowing what the platform contains is different from understanding what work it can replace or accelerate. The workflow makes the specialised value easier to evaluate.

BUSINESS IMPACT

Strong capabilities risk being perceived as another collection of familiar tools instead of a meaningful improvement to an investor's existing research process.

05-OBSERVATION-03

The trial becomes compelling after the workflow.

WHAT HAPPENS

A free-trial CTA appears while the product is still being explained broadly. After the AI workflow is demonstrated, the same action becomes a natural next step for the visitor.

WHY IT MATTERS

The visitor needs a concrete picture of what they will actually try. Before seeing the workflow, the trial asks for action before that value is fully understood.

BUSINESS IMPACT

An early conversion prompt can depend on product understanding that the page has not yet established, while the demonstrated workflow creates a clearer reason to continue.

06-CLOSING-THOUGHT

9fin already has the specialised data, AI and research capabilities to make a strong case for its value.

The harder part is reaching that understanding.

The opportunity is to make the user's relevance, workflow and next action as immediate as the product's capabilities.

RECOMMENDATIONS

Clarify the primary relevance path earlier in the homepage.

Show the relationship between capabilities and workflow before asking for conversion.

Make the demonstrated workflow the clearest bridge to trial or demo.
