

The capabilities are clear. The scenario isn't — yet.

Deblock shows users what the product can do before helping them understand how those capabilities fit into their everyday financial life.

TARGET

Product & Design Teams

LOOKING FOR

A clearer picture of what Deblock is for the user as a whole.

02-EXECUTIVE-SUMMARY

The capabilities are clear. The scenario isn't — yet.

Deblock quickly shows that the product can hold money, earn a return, make payments, use a card, and work with crypto. The individual capabilities are clear, but the page is less clear about how they fit together in everyday life. The user has to connect these capabilities themselves before understanding what role Deblock could play in their financial routine.

Main observation

Deblock shows users what the product can do before helping them understand how those capabilities fit into their everyday financial life.

Executive Review

03-OBSERVATION-01

The product's role is harder to understand than its capabilities.

WHAT HAPPENS

The homepage immediately presents several things Deblock can do: earn a return, hold money, use a card, buy Bitcoin, receive a salary, and exchange crypto.

WHY IT MATTERS

Each capability is understandable on its own, but the page does not establish one simple everyday scenario that connects them.

BUSINESS IMPACT

The user must assemble the product model themselves, increasing interpretation before they understand why Deblock belongs in their everyday financial life.

04-OBSERVATION-02

The product breadth is clear before the everyday scenario is.

WHAT HAPPENS

The page moves across earning a return, app actions, the card, Bitcoin, salary payments, and crypto exchange, presenting a broad set of capabilities.

WHY IT MATTERS

This effectively communicates that Deblock is more than a single crypto function, but the capabilities arrive as a collection rather than as one coherent financial workflow.

BUSINESS IMPACT

The user has to connect the actions themselves and determine how the different parts of the product fit together in normal life.

05-OBSERVATION-03

Everyday use through the card appears too late.

WHAT HAPPENS

The card section eventually makes ordinary payments concrete, showing that Deblock can be used for everyday spending rather than only for crypto operations.

WHY IT MATTERS

This is an important part of the product model, but the user reaches it only after already processing several other capabilities.

BUSINESS IMPACT

The everyday use case is confirmed later instead of helping anchor the product's role from the beginning.

06-OBSERVATION-04

The connection between crypto and everyday money remains underexplained.

WHAT HAPPENS

The Stablecoin or Euro without friction section explains that users can send and exchange crypto for euros or other crypto.

WHY IT MATTERS

This answers whether crypto functionality exists, but it does not fully explain how that capability connects to the rest of the product and everyday use.

BUSINESS IMPACT

The page explains individual actions well, but leaves the user to connect their shared role in everyday financial life.

07-CLOSING-THOUGHT

Deblock does not lack capabilities. It shows them before it fully explains the bigger picture.

The user quickly understands that Deblock can do many different things. What is harder to understand is how those capabilities are supposed to come together in their own everyday life.

The next step for this experience is not necessarily to add more explanations for individual features, but to establish a clearer picture earlier of what Deblock is for the user as a whole.

RECOMMENDATIONS

Explain Deblock's primary role for the user before presenting a specific financial benefit as the main promise.

Present capabilities not only as individual actions, but also as parts of one coherent everyday scenario.

Connect the card to the main product promise earlier, so everyday use is obvious before the deeper product walkthrough.

Make the relationship between crypto operations and everyday money clearer instead of leaving the user to connect these parts themselves.
