

# The platform is clear. The workflow is not.

Sardine makes the value of one unified risk platform clear. The harder part is understanding what it changes for an existing risk team.

## ROLE

Risk leader at a fintech company, responsible for fraud prevention and financial crime operations.

## LOOKING FOR

A risk platform that can consolidate existing fraud and AML tools and make daily risk work easier.

## 02-EXECUTIVE-SUMMARY

### The platform is clear. The workflow is not.

Sardine quickly establishes that it solves the right problem: bringing fraud prevention, AML and transaction monitoring together in one platform. The individual capabilities are convincing. But the experience becomes less concrete when the visitor tries to understand what Sardine replaces and what working with it would actually feel like.

#### Main observation

The value of the platform is clear before the user’s practical workflow is.

## PAGES & SCREENS

Homepage

## KEY FINDING

Sardine shows what the platform can do more clearly than how it changes the user’s existing risk work.

## SERVICE

UX Review

## 03-OBSERVATION-01

### The platform is unified. The user’s stack is not.

#### WHAT HAPPENS

Sardine presents device analysis, transaction protection, attack detection and financial-crime operations as separate capabilities. The visitor has to work out how these pieces relate to the tools they already use.

#### WHY IT MATTERS

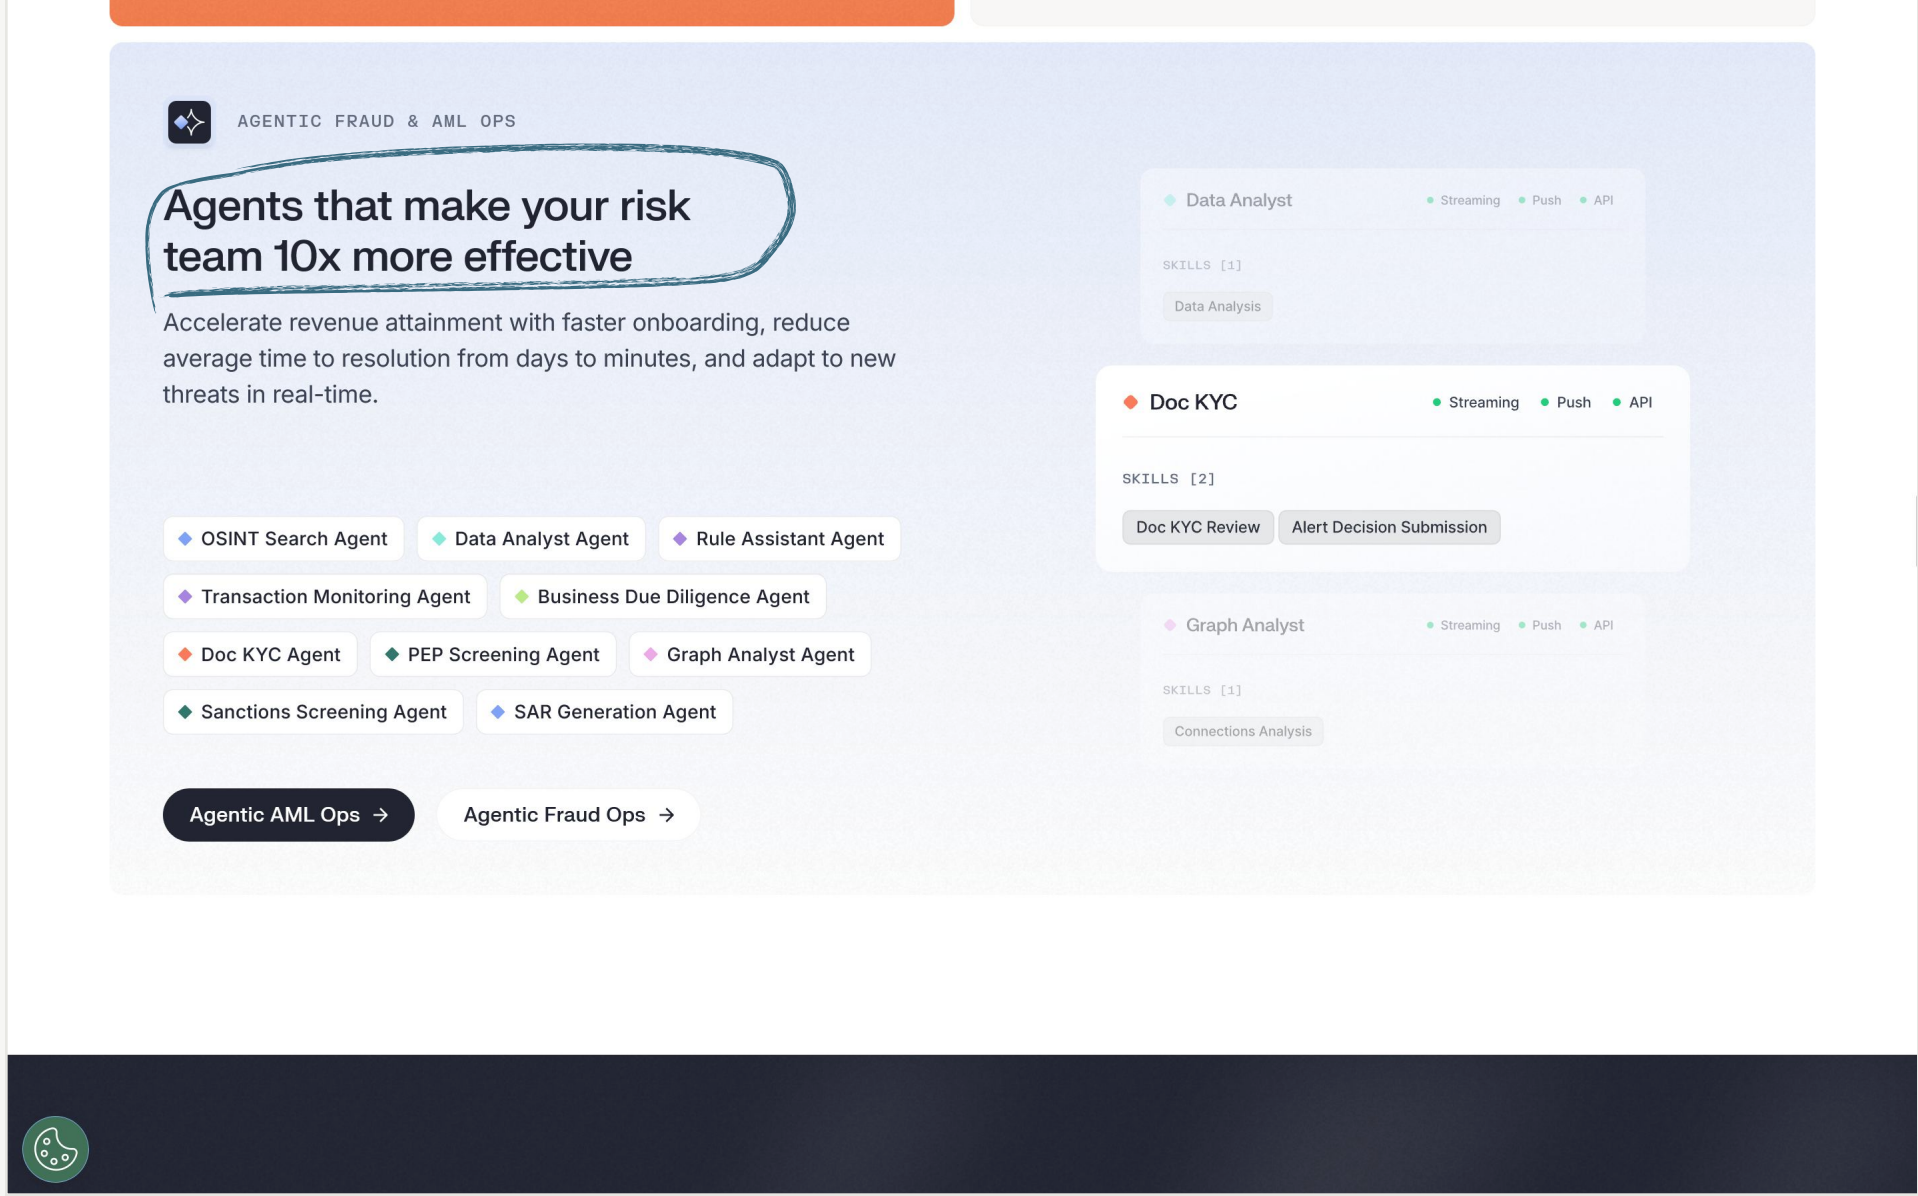

The key question is not whether Sardine has useful features, but what it can replace or consolidate from the existing risk stack.

#### BUSINESS IMPACT

The platform’s strongest value proposition requires the visitor to make part of the comparison themselves.

## 04-OBSERVATION-02

### The capabilities are clear. The daily workflow is not.

#### WHAT HAPPENS

Sardine explains what it can detect and automate, but shows little of what the risk specialist actually does inside the product after a risk is detected.

#### WHY IT MATTERS

The visitor needs to understand not only what Sardine can do, but whether their team’s everyday work will actually become easier.

#### BUSINESS IMPACT

Without that workflow, the product can feel powerful without becoming concrete enough to evaluate operationally.

## 06-CLOSING-THOUGHT

### Sardine already makes a strong case for its breadth of capability.

The opportunity is to make the before-and-after equally clear.

Show what the user’s current stack looks like, what Sardine replaces, and what their team’s work looks like afterwards.

## RECOMMENDATIONS

Show Sardine against the user’s existing risk stack.

Demonstrate a real risk workflow from detection through resolution.
